Maria Luna

It is my pleasure to present the 2023 Annual Crop Report for San Mateo County pursuant to Section 2279 of the California Food and Agricultural Code. The total estimated gross value of San Mateo County agricultural production in 2023 was \$98,969,000, an increase of 7.4% from 2022. It is important to note this gross value does not represent net profit or loss, as it does not account for inputs such as labor, packaging, transportation, and other production costs.

Across all commodity groups, vegetable production value saw the largest growth with a 30% increase in 2023. This is mainly attributed to the miscellaneous vegetables category, which includes commodities such as herbs, kale, mushrooms, etc. that are not specifically named. When a commodity has only a few producers, it is reported as an aggregated group to protect confidentiality of the growers' business practices. The increase of \$6,041,000 in gross value reported in the miscellaneous vegetable commodity group can be explained by both an increase on the price of commodities, and the realization of production not previously reported.

Numerous factors influence agricultural production, many of which are outside the control of a farmer. Winter storms of 2022-23 brought the water we had all begged for after several years of continuous drought, but not without a cost. While most crops were not planted in the ground during the heaviest of the winter storms, many farms' operational infrastructures were severely damaged in the early part of the year. Farms rely on farm roads, bridges, water systems, equipment, and even homes to produce the crops featured in this report. Despite the clean-up efforts, the water was welcome relief as holding ponds, wells, and fields began to fill to capacity.

As I think back on 2023, it is with a heavy heart remembering the seven lives that were tragically lost to gun violence on two farms in the county. The immediate trauma impacting their families, neighbors, and co-workers sent ripple effects throughout San Mateo County and up to the state. As we review our systems and tackle the hard questions, we start with an awareness of issues such as the recognition of farmworkers and agriculture's role in the food system, the scarcity of affordable housing, and a need to better understand the changing population we serve.

Featured on the cover and throughout this crop report is the art of San Mateo County's middle and high school students. The cover art was painted by Shayla Peralta Lopez, an 11th grader from San Mateo High School who won the top prize for her beautiful representation of agriculture featuring flowers, pumpkins, livestock, and the hardworking people of the community. Thank you to all the artists that submitted their work for the report. It was truly inspiring for Agriculture/Weights & Measures staff and San Mateo County Farm Bureau to consider such beautiful works of art.

A special thanks to Michael Wong and Thais Spiropoulos for putting this report together and to the growers and ranchers that voluntarily supplied their valuable data.

Respectfully submitted,

Koren J. Widdel
Agricultural Commissioner
Sealer of Weights and Measures

County of San Mateo Agricultural Commissioner

The San Mateo County Department of Agriculture hosted its first ever cover art contest to highlight some of the top agricultural commodities produced within the county. The purpose of this contest was to develop a greater appreciation of agriculture through the creation of creative pieces by student artists. Prize money for the top three entrants was donated by the San Mateo County Farm Bureau through the As Fresh As It Gets program (learn more about this program on page 17). The top three entrants' artwork submissions are featured on this page, and additional artwork is also featured throughout this report as honorable mentions due to the impressive quality of the contest entries.

Honorable Mentions

Elizabeth Zakharov, Design Tech High School - Page 5
 Naisha Oberai, Bowditch Middle School - Page 6
 Poema Bowen, San Mateo High School - Page 8
 Siwoo (Sienna) Lee, Mercy High School - Page 8
 Marian Manahan, El Camino High School - Page 8
 Mi Nguyen, Bowditch Middle School - Page 9
 Anja Voss, San Mateo High School - Back Cover

2nd Place: \$300

Artist: Tamar Dayagi **Grade:** 11
Title: Sunlit Flowers **Medium:** watercolor, colored pencils

Tamar is a junior at San Mateo High School. She loves art and animals, and wants to illustrate children's books one day.

1st Place: \$500

Artist: Shayla Peralta Lopez **Grade:** 11
Title: La finca de sueños **Medium:** gouache

Shayla is a junior at San Mateo High School. She enjoys drawing, being with her pals, and watching mystery shows. She plans to go to college to study design or dentistry.

3rd Place: \$200

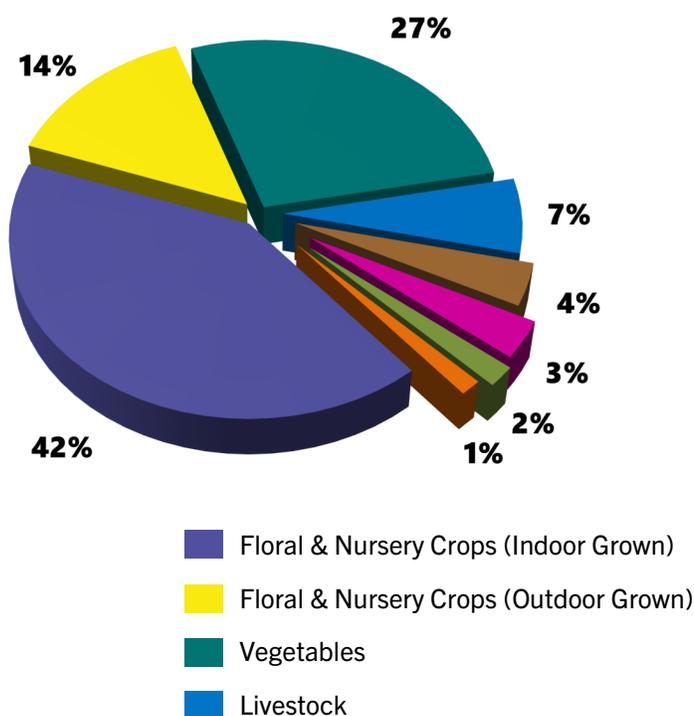

Artist: Kathryn Bagby **Grade:** 8
Title: Curated Garden **Medium:** colored pencils, markers

Kathryn is an eighth grader at Tierra Linda Middle School. She has been drawing her entire life and plans to go to art school in the future.

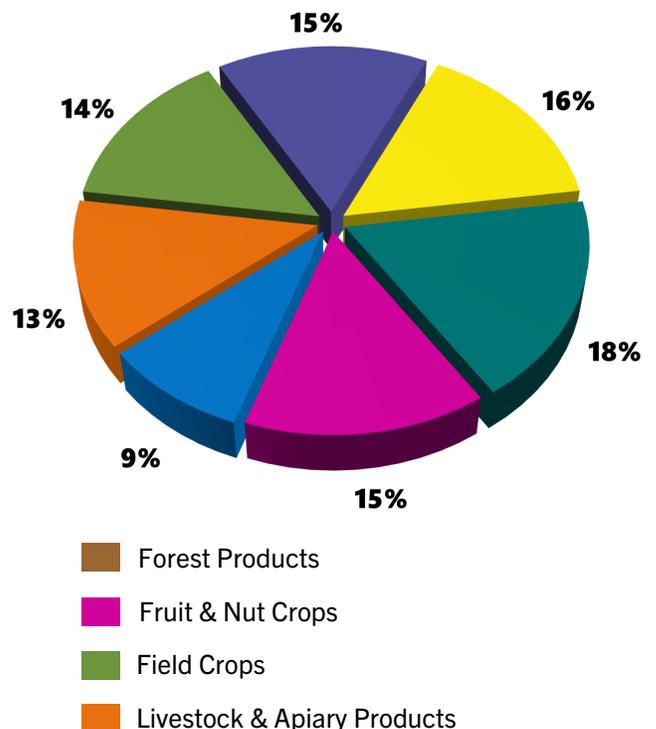

GROSS PRODUCTION VALUE

Commodity Group	2023	2022
Floral and Nursery Crops	\$55,291,000	\$55,103,000
Vegetables	\$26,808,000	\$20,649,000
Livestock	\$6,583,000	\$6,397,000
Forest Products	\$3,759,000	\$3,887,000
Fruit and Nut Crops	\$3,353,000	\$2,731,000
Field Crops	\$1,818,000	\$2,052,000
Livestock Products and Apiary	\$1,357,000	\$1,360,000
PRODUCTION TOTAL	\$98,969,000	\$92,179,000

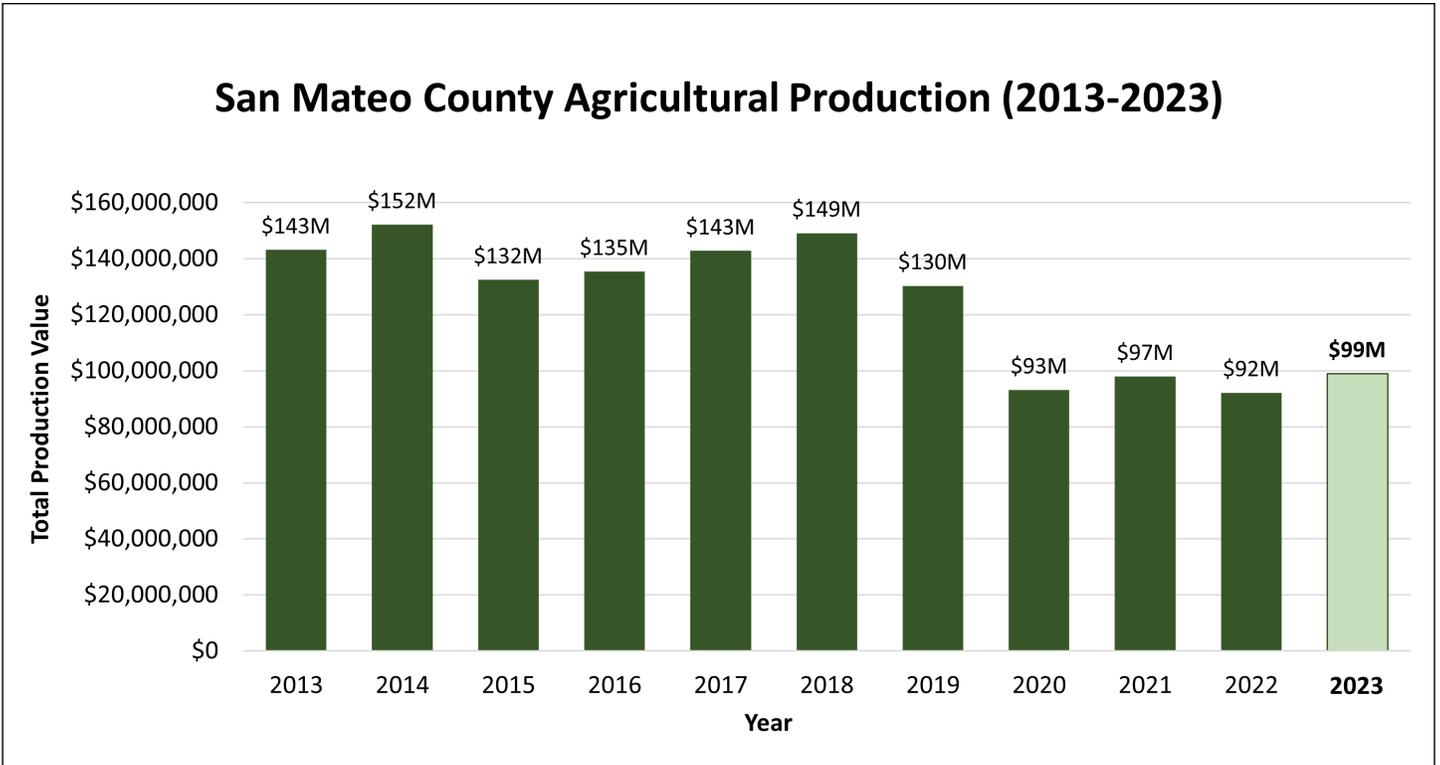

AGRICULTURAL PRODUCTION VALUES

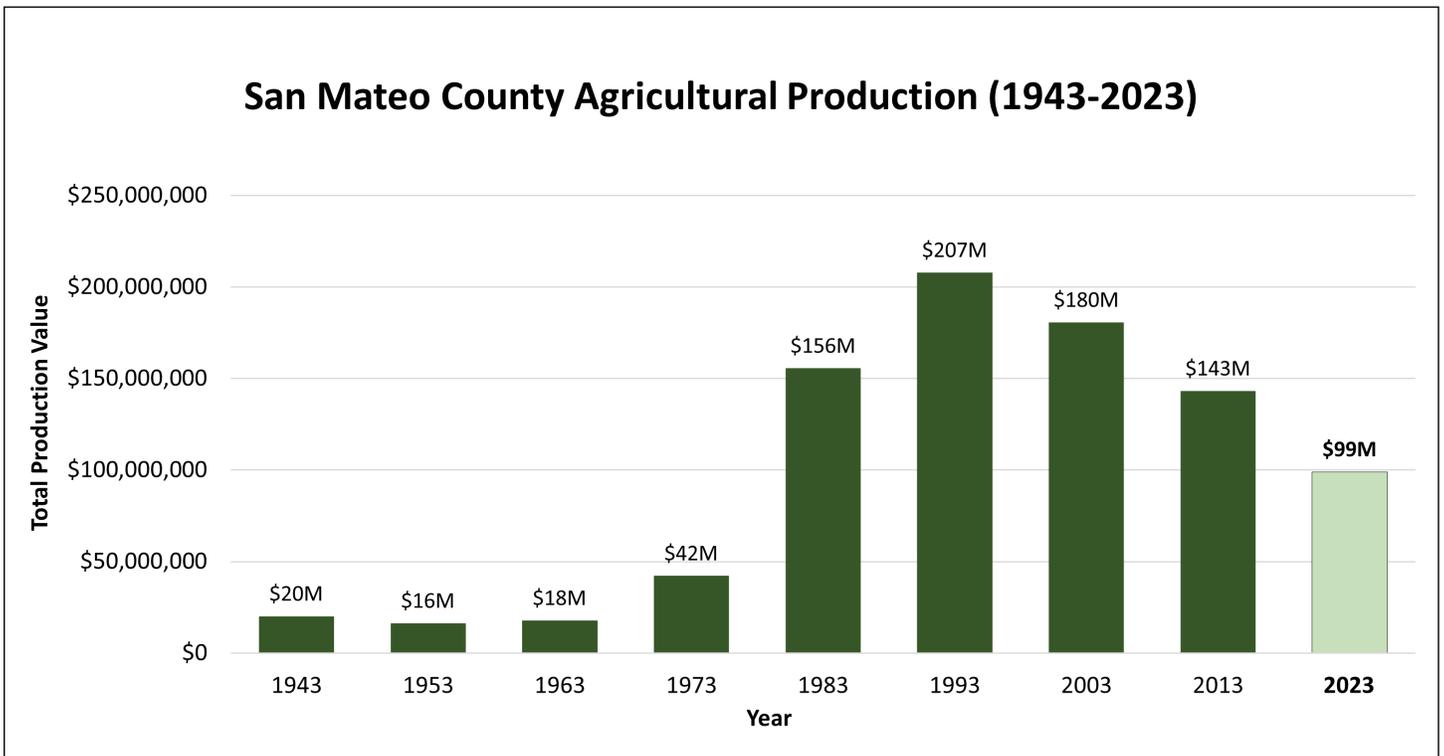

PRODUCERS PER COMMODITY GROUP

10 YEAR PRODUCTION VALUES

HISTORICAL PRODUCTION VALUES

INDOOR GROWN

Crop	Year	Square Feet	Total Value
Flowering and Foliage Potted Plants ¹	2023	1,926,000	\$32,171,000
	2022	1,950,000	\$30,227,000
Cut Flowers ²	2023	745,000	\$1,544,000
	2022	827,000	\$2,343,000
Bedding Plants, Cuttings, Other ³	2023	592,000	\$7,442,000
	2022	338,000	\$6,634,000
INDOOR GROWN FLORAL/ NURSERY CROP TOTAL	2023	3,263,000	\$41,157,000
	2022	3,115,000	\$39,204,000

¹Includes begonias, lilies, orchids, poinsettias, succulents, etc.

²Includes alstroemerias, freesias, hemp, lilies, ranunculus, etc.

³Includes herbs, seeds, succulents, vegetables, etc.

Indoor plant total value increases despite cut flower value losses

San Mateo County saw a 5% increase in both total value and square footage of indoor grown floral and nursery crops in 2023. The steady decrease in indoor grown cut flower production and square footage over the past few years can be partially attributed to retiring growers. Additionally, producers have been shifting focus by ramping up production of other commodities instead. Flowering and foliage potted plants remains the highest value category with its production value comprising 33% of the county's production total. While the indoor cut flower business may never reach the heights it once did within San Mateo County, new opportunities arise for other producers to prosper.

Elizabeth Zakharov

OUTDOOR GROWN

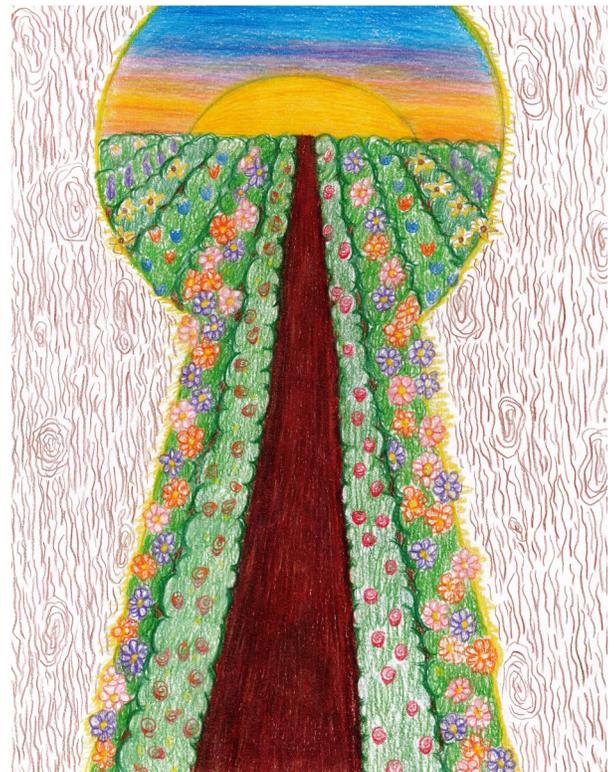

Crop	Year	Acres	Total Value
Ornamental Nursery Stock ¹	2023	80	\$10,925,000
	2022	77	\$12,503,000
Christmas Trees (cut)	2023	143	\$454,000
	2022	162	\$375,000
Cut Flowers ²	2023	180	\$2,755,000
	2022	181	\$3,021,000
OUTDOOR GROWN FLORAL AND NURSERY CROP TOTAL	2023	403	\$14,134,000
	2022	420	\$15,899,000

¹Includes herbaceous perennials, shrubs, and trees.

²Includes dahlias, hydrangeas, ranunculus, sunflowers, etc.

Outdoor grown floral/nursery crops decrease overall in value

Outdoor grown floral and nursery crops decreased in acreage by 4% and in total production value by 11% in 2023. Christmas tree production increased in value despite a reduction in acreage, while both ornamental nursery stock and outdoor cut flowers decreased in total production value. The outdoor cut flower businesses in San Mateo County have been more stable with their production when compared to the indoor cut flower businesses. Similar to previous years, ornamental nursery stock comprises the largest percentage of total value in the outdoor grown floral and nursery crop category at 77%.

Naisha Oberai

VEGETABLE CROPS

Crop	Year	PRODUCTION				VALUE	
		Acres	Per Acre	Total	Unit	Per Unit	Total
Artichokes	2023	30	2.14	64	Ton	\$2,805	\$180,000

FRUIT AND NUT CROPS

Crop	Year	Acres	Total Value
Wine Grapes, Red Varietals	2023	135	\$2,035,000
	2022	136	\$1,437,000
Wine Grapes, White Varietals	2023	40	\$467,000
	2022	40	\$404,000
Miscellaneous ¹	2023	115	\$851,000
	2022	114	\$890,000
FRUIT AND NUT CROP TOTAL	2023	290	\$3,353,000
	2022	290	\$2,731,000

¹Includes apples, berries, chestnuts, stone fruits, etc.

Both vegetable and fruit/nut crops increase in total value

Vegetable crops saw a 30% increase in total value with a decrease in acreage of 4%. Increases in total production value were seen in artichokes, fava beans, leeks, peas, pumpkins, and miscellaneous vegetables in 2023, while decreases were seen in snap beans and Brussels sprouts. Fruit and nut crops saw a 23% increase in total value with no change in acreage. This increase in value is largely attributable to the increased production value of both red and white wine grapes in the county.

Livestock/field crop values hold steady

Livestock showed an increase of 3% in production value and 2% increase in number of head sold in 2023. Livestock products and apiary production value showed a slight decrease of less than 1%. This was largely attributable to livestock products other than honey, which had a decreased production amount and decreased production value. Field crop production value decreased by 11% overall, driven by the decrease in total value of dry beans. Forest products production value decreased by 3%.

Mi Nguyen

LIVESTOCK

Commodity	Year	Number Head Sold	Total Value
Cattle and Calves	2023	1,429	\$3,012,000

	2022			2,084,104 lbs			\$10,197,074

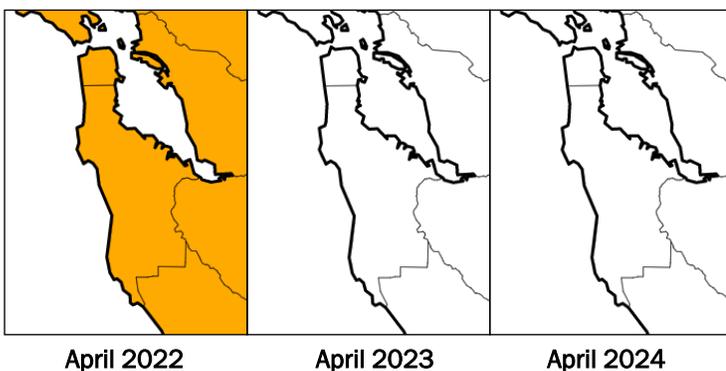

*The CA Department of Fish and Wildlife canceled commercial salmon fishing in 2023 due to past drought conditions impacting salmon populations. Source: CA Department of Fish and Wildlife Poundage Value of Landings. Princeton-Half Moon Bay. Informational only, value not included in annual report.

WATER RESOURCES

Rainfall data taken from the Western Regional Climate Center for Half Moon Bay shows totals in the 2022/2023 water year were up 68% compared to the last 20 years. The months of December through March in particular were characterized by a significantly increased amount of rainfall compared to the 20-year average. Fortunately, the rainfall events during the 2022/2023 water year were spread out more evenly throughout each month, rather than focused on a few singular storm events as in the 2021/2022 water year. This helped to prevent flooding conditions that could be detrimental to agriculture.

DROUGHT CONDITIONS

Drought conditions have markedly improved between April 2022 and April 2024, as shown by the U.S. Drought Monitor. Although drought conditions were characterized by the D2 severe drought condition in 2022, increased rainfall events in 2023 aided in transitioning towards no drought condition by April 2023. This trend continued into the next year, with no drought designated into April 2024 in San Mateo County.

SUSTAINABLE AGRICULTURE REPORT

Sustainable agriculture utilizes farming practices that conserve resources and plant health, and ensures the economic vitality of the farm. Activities carried out through programs such as Pest Detection, Pest Exclusion, and Weed Management provide safeguards to maintain livestock and crop health. Early pest detection and proactive management of invasive pests using integrated pest management (IPM) strategies help protect California’s agricultural industry and reduces environmental stressors.

PEST DETECTION

Pest Detection staff place and monitor insect traps in San Mateo County to find pests before infestations can take hold and cause major damage. Examples of these traps include: yellow panel traps, Jackson traps, spongy moth delta traps, and Japanese beetle traps. In 2023, 4,243 traps were placed in host plants and serviced 54,137 times by pest detection staff. None of the insect pests listed on the right were detected in San Mateo County during this time.

Asian Citrus Psyllid	European Corn Borer
European Grape Vine Moth	European Pine Shoot Moth
Fruit Fly species of <i>Bactrocera</i> , <i>Dacus</i> , <i>Ceratitis</i> , and <i>Anastrepha</i>	Glassy-Winged Sharpshooter
Japanese Beetle	Spongy Moth

PEST EXCLUSION

Pest Exclusion inspections of imported agricultural shipments prevent the introduction and establishment of damaging pests. Exotic pests are regularly intercepted by staff biologists at parcel facilities, San Francisco International Airport, nurseries, and other entry points during daily inspections. Origin certification of shipments are also verified for compliance with plant quarantines, regulations, and entry requirements. When an infested or noncompliant shipment is found, it may be destroyed, reconditioned and released, or returned to the shipper.

PEST EXCLUSION INSPECTIONS

Type of Shipment	Inspected	Rejected	Pests Intercepted
Parcel Carriers	27,389	98	10
Truck	494	10	5
Air	3,114	4	8
Sea Containers	1	0	0
Household Goods (Spongy Moth and Spotted Lanternfly)	11	0	0
Nursery Stock (Glassy-Winged Sharpshooter)	2,840	0	0

In 2023, department biologists intercepted many A-rated and Q-rated insects, weed pests, and plant diseases as confirmed by the California Department of Food and Agriculture (CDFA) Plant Pest Diagnostics Center. Based on a review of each pest's biology, A-rated pests and diseases are deemed to have serious economic and environmental impacts if established within the State. Q-rated pests are also suspected to cause harm to agriculture or the environment, though their biology is less fully understood. To prevent these pests from spreading within the agricultural industry and environment, both A-rated and Q-rated pest finds result in regulatory actions of shipment rejection, containment, or destruction.

A-Rated Pests (Number of times intercepted)

<i>Bactrocera dorsalis</i> Oriental Fruit Fly (1)
<i>Candidatus Liberibacter asiaticus</i> Citrus Greening/Huanglongbing (8)
<i>Kallitaxila granulata</i> Planthopper (1)
<i>Pinnaspis strachani</i> Lesser Snow Scale (2)

Oriental Fruit Fly

Planthopper

Armored Scale

Q-Rated Pests (Number of times intercepted)

<i>Aphididae</i> Aphids (3)	<i>Gastropoda</i> Slugs & Snails (6)
<i>Cercopidae</i> Spittlebugs (1)	<i>Gracillariidae</i> Leaf Blotch Miner Moths (1)
<i>Coccidae</i> Soft Scales (1)	<i>Miridae</i> Plant Bugs (2)
<i>Delphacidae</i> Planthoppers (1)	<i>Pseudococcidae</i> Mealybugs (3)
<i>Diaspididae</i> Armored Scales (2)	<i>Tortricidae</i> Tortrix Moths (2)
<i>Formicidae</i> Ants (9)	<i>Unknown</i> Egg Masses (3)

WEED MANAGEMENT

Weed management projects on fertile capeweed, skeletonweed, jubata grass, and purple loosestrife continued through 2023. The department surveyed populations of noxious weeds throughout the county and mapped them on Calflora to track progress on eradication efforts. Surveying and mapping also included tree of heaven (*Ailanthus altissima*), an aggressive invasive tree and preferred host for the spotted lanternfly (*Lycorma delicatula*), an invasive planthopper that threatens to cause significant economic damage to many of California’s important crops. The department continued to host bimonthly meetings for the San Mateo County Weed Management Area Group, which serves as a networking tool for local weed managers to share successes and losses in control efforts.

Fertile Capeweed

Jubata Grass

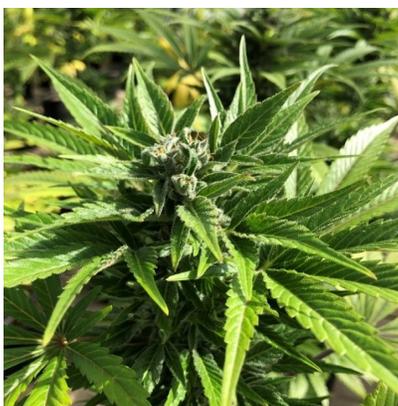

Purple Loosestrife

Skeletonweed

INDUSTRIAL HEMP AND COMMERCIAL CANNABIS

Two hemp registrations were active in 2023, with a total registered square footage of 476,000 for cultivation and storage. Department biologists performed 4 site visits over the year and took samples to ensure hemp plants were within the allowed THC tolerance of $\leq 0.3\%$ prior to harvest.

Cannabis licenses issued in San Mateo County include: five for small mixed-light, three for medium mixed-light, and three for nursery. Total registered area for commercial cannabis was 231,000 sq ft in 2023.

INTEGRATED PEST MANAGEMENT

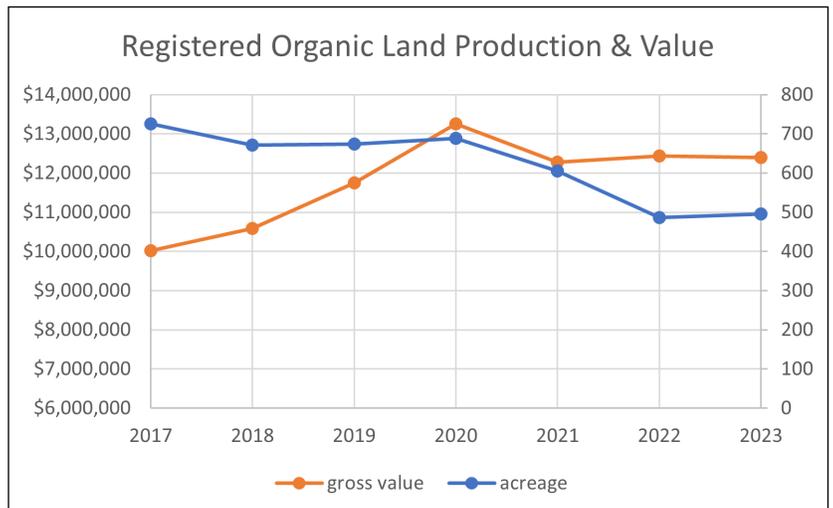

Integrated Pest Management (IPM) is a systematic approach to managing destructive pests and keeping them below economic thresholds. IPM begins with identification and monitoring of target pests and uses interactive control strategies including: natural enemies, biological controls, sanitation, less toxic pesticides, traps, and pheromones to disrupt reproduction. Applying certain IPM practices not only controls pests, but also benefits biodiversity in both the soil and surrounding environment. Crop and grazing rotations, cover crops, and mulching are just a few techniques implemented by agricultural producers that help capture and sequester carbon dioxide. This helps to create healthier soils to support production as well as combat weather impacts of climate change such as extreme fluctuations in soil moisture. San Mateo County growers have received funding for various IPM projects related to techniques such as these in past years.

For information on agricultural financial resources, please visit:
<https://www.smcgov.org/agwm/financial-resources>

ORGANIC FARMING

Organic farming utilizes approved methods of cultural, biological, and mechanical control to produce a variety of agricultural products without the usage of synthetic substances. San Mateo County agricultural land registered with the California Department of Food and Agriculture (CDFA) as organic production was an estimated 496 acres (excluding rangeland), totaling an estimated gross production value of \$12,392,000 from 21 registered organic producers in 2023.

DIRECT MARKETING

Direct sales from producers to consumers provide greater profits for farmers, reduce packaging and transportation, promote the local agricultural economy, and increase access to the freshest produce, flowers, and meat. These avenues include: Certified Farmers' Markets (CFMs), Community Supported Agriculture (CSA), Farm Stands, and U-pick. In 2023, a total of 42 Certified producer's certificates were issued in San Mateo County for producers to sell their agricultural products at CFMs. There were also 23 active CFMs that were inspected 60 times throughout the year to ensure compliance with direct marketing laws and regulations.

To find up-to-date locations of Certified Farmers' Markets in San Mateo County, please visit:

<https://www.smcgov.org/agwm/find-certified-farmers-market>

AS FRESH AS IT GETS

For locals, the knowledge that “local produce” does not just come from California, but also comes directly grown from San Mateo County, can be a strong motivating factor for deciding what to purchase. Keep an eye out for the “As Fresh as it Gets” (AFAIG) logo when visiting local farmers' markets, restaurants, hotels, and farm stands. That logo indicates that the produce or products sold in those establishments are San Mateo County grown. The AFAIG Program connects residents and visitors to San Mateo County's farmers, and fishermen, and the restaurants and hotels that serve fresh and local products. The program's goals are to get the word out about the San Mateo County's delicious and nutritious fresh products and where to get them, to promote the county as a world-class destination for culinary tourism, and to support the farmers, fishermen, vintners, and brewers who make it all possible.

For more information on the AFAIG Program, please visit:

<https://www.thesanfranciscopeninsula.com/fresh-as-it-gets/>

WEIGHTS AND MEASURES

The other half of the Department’s namesake, Weights and Measures, is responsible for the preservation, maintenance, and enforcement of measurement standards (weight, volume, time, distance) necessary for value comparison by consumers and essential for fair competition within industry. This is accomplished by comparing the performance of weighing and measuring devices against certified standards, inspecting prepackaged products to verify label statements, and verifying petroleum products meet the product label standards.

Devices	Inspected	Passed	Failed	Compliance
Gas Station Pumps	4,378	4,282	96	98%
Water, Gas, Electric Submeters	6,679	6,142	536	92%
Small Capacity Scales	1,572	1,554	18	99%
Propane Dispensers	29	29	0	100%

Weights and Measures officials conduct inspections at businesses within San Mateo County that use commercial weighing and measuring devices such as gas station pumps, water, gas, and electric submeters, scales, and propane dispensers. When these commercial weighing and measuring devices comply with all the state laws and regulations, each device is sealed by applying an official San Mateo County seal (see top-right). Each business that uses commercial point-of-sale systems to charge consumers for commodities is also required to be registered and inspected for pricing accuracy. Each of these businesses are required to post a notice (see bottom-right) to consumers at each point-of-sale checkout register stating consumers are entitled to the lowest advertised price by the store.

Price Verification	Total
Locations Inspected for Price Accuracy	416
Locations Inspected with Overcharges	67
Packages Scanned	13,795
Package Overcharges	208
